

SECURE DESTRUCTION

Secure Destruction Service

HIPAA, SOX, GLB, OMB - this alphabet soup of acronyms add up to one thing - documents that are not properly destroyed equal potential liability.

At DataSafe, our focus is to provide a secure destruction methodology that meets regulatory requirements and remains cost effective. Documents are shredded into 16mm size pieces, mixed with other shredded paper and recycled. We can provide locked and secure bins or consoles and remove the paper for confidential destruction, or for just a few dollars more, bring a shred truck to your site for witnessed destruction.

Signing up for recurring destruction service makes it easy to manage data destruction. Just schedule your preferred date/time and a specially trained DataSafe representative will come to your site weekly, bi-weekly or monthly and securely destroy your documents or media and issue you a Certificate of Destruction. "Just set it and forget it."

DataSafe's Secure Destruction is:

- Secure: we use locked destruction receptacles
- Confidential: keep your proprietary information safe
- Scheduled: service when you need it
- Green: environmentally responsible
